Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

LOCUS       CRUPGPI                 4296 bp    mRNA    linear   ROD 22-JUN-1995
DEFINITION  C.griseus P-glycoprotein (isoform class I) mRNA, complete cds.
ACCESSION   M60040
VERSION     M60040.1  GI:191164
KEYWORDS    multidrug resistance; p-glycoprotein; transmembrane protein.
SOURCE      C.griseus adult liver and ovary, cDNA to mRNA.
  ORGANISM  Cricetulus griseus
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
            Mammalia; Eutheria; Rodentia; Sciurognathi; Muridae; Cricetinae;
            Cricetulus.

HUMMDR3
LOCUS       HUMMDR3                 3924 bp    mRNA    linear   PRI 11-JUN-1993
DEFINITION  Human membrane glycoprotein P (mdr3) mRNA, complete cds.
ACCESSION   M23234
VERSION     M23234.1  GI:187501
KEYWORDS    P-glycoprotein; membrane glycoprotein.
SOURCE      Human liver, cDNA to mRNA, clone 3.27.
  ORGANISM  Homo sapiens
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
            Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.
REFERENCE   1  (bases 1 to 3924)
  AUTHORS   van der Bliek,A.M., Kooiman,P.M., Schneider,C. and Borst,P.
  TITLE     Sequence of mdr3 cDNA encoding a human P-glycoprotein
  JOURNAL   Gene 71 (2), 401-411 (1988)
  MEDLINE   89138016
   PUBMED   2906314
COMMENT     Draft entry and computer-readable sequence for [1] kindly provided
            by P. Borst, 21-MAR-1989.

  Pred. No. is the number of results predicted by chance to have a
  score greater than or equal to the score of the result being printed,
  and is derived by analysis of the total score distribution.

PT   New transporters and ion channels (TRICH) polypeptides, useful for
PT   diagnosing, preventing, and treating disorders associated with an
PT   abnormal expression or activity of TRICH, e.g. immunological, muscular
PT   or renal disorders  -
XX
PS   Claim 5; Page 172; 178pp; English.
XX
CC   The invention relates to human transporters and ion channels (TRICH)
CC   polypeptides, a naturally occurring amino acid sequence 90 % identical to
CC   TRICH, a biologically active fragment of TRICH or an immunogenic fragment
CC   of TRICH. Also included are an isolated polynucleotide encoding TRICH,
CC   a recombinant polynucleotide comprising a promoter sequence operably
CC   linked to the TRICH polynucleotide, a cell transformed with the
CC   recombinant polynucleotide, a transgenic organism comprising the
CC   recombinant polynucleotide, an isolated antibody that binds specifically
CC   to TRICH, and screening for compounds which bind to TRICH, modulate
CC   TRICH, modulate TRICH expression or are ant/agonists of TRICH.
CC   The polypeptides are useful for diagnosing, treating, and
CC   preventing transport, neurological, muscle, immunological disorders
CC   (e.g. scleroderma, systemic lupus erythematosus, allergies), cell
CC   proliferative disorders such as cancers (e.g. leukaemia, cervical or
CC   breast cancers), neurodegenerative disorders (e.g. Parkinson's disease,
CC   Alzheimer's disease), muscular disorders (e.g. myotonic dystrophy,
CC   catatonia), endocrine disorders (e.g. diabetes, Grave's disease),
CC   gastrointestinal disorders (e.g. Crohn's disease), renal disorders
CC   (e.g. Good pasture's syndrome), viral, bacterial, fungal, parasitic,
CC   protozoal and helminthic infections, cardiovascular disorders (e.g.
CC   atherosclerosis), or hepatic diseases (e.g. cirrhosis) and many
CC   other diseases and disorders detailed in the specification. They can also
CC   be used in assessing the effects of exogenous compounds on the
CC   expression of nucleic acid and amino acid sequences of transporters and
CC   ion channels. TRICH or its fragments may also be used in screening for
CC   compounds that specifically bind to and modulate the activity of TRICH.
CC   The polynucleotides can be used to create knock-in humanised animals or
CC   transgenic animals to model human disease. The present sequence
CC   encodes a TRICH protein.

CC   The present sequence is that of human ATP binding cassette
CC   subfamily B protein ABCB4 cDNA.  The cDNA was identified using a
CC   differential display method in which monocytes from peripheral
CC   blood were subjected to macrophage differentiation and cholesterol
CC   loading with acetylated low density lipoproteins and subsequent
CC   deloading with high density lipoprotein (HDL3) to identify
CC   cholesterol sensitive genes.  The gene maps to chromosome 7q21
CC   and is also termed MDR3 (multidrug resistance).  The invention
CC   provides cholesterol-sensitive ABC genes (see AAZ94734-63).  These
CC   genes, and polypeptides encoded by them, can be used for diagnostic
CC   and therapeutic applications, and for biochemical or cell-based
CC   assays to screen for pharmacologically active modulator compounds
CC   useful for the treatment of lipid disorders, atherosclerosis or
```

```
CC   other inflammatory diseases such as psoriasis and lupus
CC   erythematosus.

PT   Using phosphatidylcholine having mucous membrane protective activity to
PT   prevent or treat large intestinal diseases, such as ulcerative colitis
PT   or pouchitis  -
XX
PS   Disclosure; Page 17-22; 22pp; German.
XX
CC   This invention describes a novel medicament containing a therapeutically
CC   effective amount of phosphatidylcholine to treat diseases, where
CC   phosphatidylcholine has an advantageous mucous membrane protective
CC   activity in the large intestine. The invention describes (1) a method
CC   to regulate presence or absence of MDR(multidrug resistance)-3
CC   transcription in a sample from patients with suspicion of stomach and
CC   colon diseases, where treatment with phosphatidylcholine is indicated;
CC   (2) a diagnostic test, to detect ulcerative colitis, pouchitis, large
CC   intestinal inflammation, Crohn's disease, diverse colitis, infectious
CC   enteritis/colitis, inflammation through X-ray treatment, antibiotics,
CC   chemotherapeutics, drugs or chemicals or large intestinal carcinoma,
CC   contains MDR3-specific primers to detect mutations in the MDR3 gene
CC   family and their interactions partners (in particular transcription
CC   factors); and (3) a method to manufacture a medicament for local gene
CC   therapy in the ileum with the ideal MDR3-analogous genes for patients
CC   with missing or decreased expression of MDR3-analogous proteins. The
CC   products of the invention have anti-ulcer, anti-inflammatory and
CC   cytostatic activity. The orally administered delayed-release form of
CC   phosphatidylcholine prevents premature resorption and provides for
CC   targeted release in the lower section of the small or large intestine.
CC   This sequence encodes the human MDR-3 protein described in the method of
CC   the invention.

PT   Diagnosing and detecting the progression of liver cancer,
PT   hepatocellular carcinoma or metastatic liver tumor in a patient,
PT   involves detecting the level of expression of two or more genes in a
PT   liver tissue sample  -
XX
PS   Claim 1; SEQ ID NO 2299; 298pp; English.
XX
CC   The invention relates to a novel method for diagnosing and detecting the
CC   progression of liver cancer, hepatocellular carcinoma or metastatic liver
CC   tumour in a patient, and differentiating metastatic liver cancer from
CC   hepatocellular carcinoma in a patient, involving detecting the level of
CC   expression of two or more genes represented in ABN93503-ABN97455 in a
CC   tissue sample. The method of the invention has hepatotropic, and
CC   cytostatic activity. The method is useful for diagnosing and detecting
CC   the progression of liver cancer, hepatocellular carcinoma and metastatic
CC   liver carcinoma in a patient. The method is useful for identifying
CC   expression profiles which serve as useful diagnostic markers as well as
CC   markers that can be used to monitor disease states, disease progression,
CC   drug toxicity, drug efficacy and drug metabolism.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences.

PT   New dog P-glycoproteins (PGP) and their encoding nucleic acids, useful
PT   for determining the bioavailability of drugs and for screening for dog
PT   PGP inhibitors -
XX
PS   Claim 3; Page 58-63; 111pp; English.
XX
CC   The invention relates to dog P-glycoprotein (PGP) also referred
CC   as multidrug transporter (MDR1) and nucleic acids encoding them.
CC   The invention also includes fragments and biologically functional
CC   variants of dog P-glycoprotein. PGP and their nucleic acids are
CC   useful for determining the bioavailability of drugs and for
CC   screening PGP inhibitors. They are useful for the diagnosis and
CC   treatment of conditions characterised by PGP activity, by
CC   reducing or increasing PGP activity in a cell. PGP nucleic acids
CC   are used as oligonucleotide probes. Complements of PGP nucleic
CC   acids are useful as antisense oligonucleotides, to induce a PGP
CC   'knockout' phenotype. They are used to prepare a non-human
CC   transgenic animal, which are valuable as genetic models for
CC   human diseases.
CC   The present sequence is dog P-glycoprotein (PGP) cDNA. This
CC   sequence is also referred as Genotype C cDNA. The
CC   PGP enzyme functions as an efflux pump exporting small molecules
CC   across the cell membrane. This enzyme is a member of the ABC
CC   transporter family.

PT   New dog P-glycoproteins (PGP) and their encoding nucleic acids, useful
PT   for determining the bioavailability of drugs and for screening for dog
PT   PGP inhibitors -
XX
PS   Claim 9; Page 85-90; 111pp; English.
XX
CC   The invention relates to dog P-glycoprotein (PGP) also referred
CC   as multidrug transporter (MDR1) and nucleic acids encoding them.
CC   The invention also includes fragments and biologically functional
CC   variants of dog P-glycoprotein. PGP and their nucleic acids are
CC   useful for determining the bioavailability of drugs and for
CC   screening PGP inhibitors. They are useful for the diagnosis and
CC   treatment of conditions characterised by PGP activity, by
CC   reducing or increasing PGP activity in a cell. PGP nucleic acids
CC   are used as oligonucleotide probes. Complements of PGP nucleic
CC   acids are useful as antisense oligonucleotides, to induce a PGP
CC   'knockout' phenotype. They are used to prepare a non-human
CC   transgenic animal, which are valuable as genetic models for
CC   human diseases.
CC   The present sequence is dog P-glycoprotein (PGP) allelic variant
CC   (Genotype A) cDNA. The PGP enzyme functions as an efflux pump
CC   exporting small molecules across the cell membrane. This enzyme
CC   is a member of the ABC transporter family.

PT   Novel isolated nucleic acid encoding cynomologous monkey P-glycoprotein
PT   (PGP) and homologous PGP polypeptides are useful for predicting
PT   bioavailability of compound and increasing PGP transporter activity in
PT   cell  -
XX
PS   Example 1; Page 51-57; 84pp; English.
XX
CC   This invention relates to a polynucleotide sequence encoding a
CC   cynomologous monkey P-glycoprotein (PGP), and an allelic variant of the
CC   PGP protein. PGP, also known as multidrug transporter, MDR1 is a member
CC   of the ABC transporter superfamily. The enzyme serves as an efflux pump
CC   exporting small molecules across the cell membrane. The invention
CC   includes a cynomologous monkey (Macaca fascicularis) PGP coding sequence
CC   and protein, and also that of an allelic variant. The PGP polynucleotide
CC   sequence is useful for increasing PGP transporter activity in a cell.
CC   Antisense sequences of the cDNA are useful for inhibiting PGP transport
CC   activity in a mammalian cell. They may also be used for increasing the
CC   bioavailability of a drug. The present sequence represents cDNA encoding
CC   cynomologous monkey P-glycoprotein.

PT   Novel isolated nucleic acid encoding cynomologous monkey P-glycoprotein
PT   (PGP) and homologous PGP polypeptides are useful for predicting
PT   bioavailability of compound and increasing PGP transporter activity in
PT   cell  -
XX
PS   Example 1; Page 59-65; 84pp; English.
XX
CC   This invention relates to a polynucleotide sequence encoding a
CC   cynomologous monkey P-glycoprotein (PGP), and an allelic variant of the
CC   PGP protein. PGP, also known as multidrug transporter, MDR1 is a member
CC   of the ABC transporter superfamily. The enzyme serves as an efflux pump
CC   exporting small molecules across the cell membrane. The invention
CC   includes a cynomologous monkey (Macaca fascicularis) PGP coding sequence
CC   and protein, and also that of an allelic variant. The PGP polynucleotide
CC   sequence is useful for increasing PGP transporter activity in a cell.
CC   Antisense sequences of the cDNA are useful for inhibiting PGP transport
CC   activity in a mammalian cell. They may also be used for increasing the
CC   bioavailability of a drug. The present sequence represents cDNA encoding
CC   cynomologous monkey P-glycoprotein. This sequence contains a 9 nucleotide
CC   insert compared to the PGP allelic variant given in AAF86127.

PT   New dog P-glycoproteins (PGP) and their encoding nucleic acids, useful
PT   for determining the bioavailability of drugs and for screening for dog
PT   PGP inhibitors -
XX
```

```
PS   Claim 9; Page 102-107; 111pp; English.
XX
CC   The invention relates to dog P-glycoprotein (PGP) also referred
CC   as multidrug transporter (MDR1) and nucleic acids encoding them.
CC   The invention also includes fragments and biologically functional
CC   variants of dog P-glycoprotein. PGP and their nucleic acids are
CC   useful for determining the bioavailability of drugs and for
CC   screening PGP inhibitors. They are useful for the diagnosis and
CC   treatment of conditions characterised by PGP activity, by
CC   reducing or increasing PGP activity in a cell. PGP nucleic acids
CC   are used as oligonucleotide probes. Complements of PGP nucleic
CC   acids are useful as antisense oligonucleotides, to induce a PGP
CC   'knockout' phenotype. They are used to prepare a non-human
CC   transgenic animal, which are valuable as genetic models for
CC   human diseases.
CC   The present sequence is dog P-glycoprotein (PGP) allelic variant
CC   (Genotype D) cDNA. The PGP enzyme functions as an efflux pump
CC   exporting small molecules across the cell membrane. This enzyme
CC   is a member of the ABC transporter family.

XX
PS   Claim 2; Page 23-24; 33pp; English.
XX
CC   The present cDNA sequence encodes rat multidrug resistance
CC   protein 1a (mdr1a). This protein is a member of the multi-specific drug
CC   transporters family. Mdr1a is used in assays to provide information on
CC   drug formulation, selection of formulation excipients and compound
CC   design. They are used in cell based, membrane based, binding or other
CC   assays to provide information that may enhance drug formulation. This
CC   invention further relates to the generation of in vivo and in vitro
CC   comparison data to predict oral absorption and pharmacokinetics. This
CC   enables the selection of drugs with optimal pharmacokinetics, i.e. good
CC   oral bioavailability, brain penetration, plasma half life, and minimum
CC   drug interaction. Transgenic and knock-out animals created using rat
CC   mdr1a provides an insight into treating and preventing human diseases
CC   including cancer, inflammation, cardiovascular disease, central nervous
CC   system disorders, auto-immune and kidney disease.

PT   Isolated rat mdr1a polynucleotides and polypeptides, useful in assays
PT   to provide information on drug formulation, selection of formulation
PT   excipients and compound design -
XX
PS   Claim 11; Page 27-29; 33pp; English.
XX
CC   The present cDNA sequence encodes rat multidrug resistance protein 1a
CC   (mdr1a). This cDNA is derived from EST (expressed sequence tag)
CC   sequences. Mdr1a is used in assays to provide information on
CC   drug formulation, selection of formulation excipients and compound
CC   design. They are used in cell based, membrane based, binding or other
CC   assays to provide information that may enhance drug formulation. This
CC   invention further relates to the generation of in vivo and in vitro
CC   comparision data to predict oral absorption and pharmacokinetics. This
CC   enables the selection of drugs with optimal pharmacokinetics, i.e. good
CC   oral bioavailability, brain penetration, plasma half life, and minimum
CC   drug interaction. Transgenic and knock-out animals created using rat
CC   mdr1a provides an insight into treating and preventing human diseases
CC   including cancer, inflammation, cardiovascular disease, central nervous
CC   system disorders, auto-immune and kidney disease.

PT   New dog P-glycoproteins (PGP) and their encoding nucleic acids, useful
PT   for determining the bioavailability of drugs and for screening for dog
PT   PGP inhibitors -
XX
PS   Claim 1; Page 66-72; 111pp; English.
XX
CC   The invention relates to dog P-glycoprotein (PGP) also referred
CC   as multidrug transporter (MDR1) and nucleic acids encoding them.
CC   The invention also includes fragments and biologically functional
CC   variants of dog P-glycoprotein. PGP and their nucleic acids are
CC   useful for determining the bioavailability of drugs and for
CC   screening PGP inhibitors. They are useful for the diagnosis and
CC   treatment of conditions characterised by PGP activity, by
CC   reducing or increasing PGP activity in a cell. PGP nucleic acids
CC   are used as oligonucleotide probes. Complements of PGP nucleic
CC   acids are useful as antisense oligonucleotides, to induce a PGP

```
CC   'knockout' phenotype. They are used to prepare a non-human
CC   transgenic animal, which are valuable as genetic models for
CC   human diseases.
CC   The present sequence is dog P-glycoprotein (PGP) cDNA. The
CC   PGP enzyme functions as an efflux pump exporting small molecules
CC   across the cell membrane. This enzyme is a member of the ABC
CC   transporter family.

PT   Inhibiting gene expression in cells, useful for e.g. treating tumors,
PT   by introducing double-stranded complementary oligoRNA having unpaired
PT   terminal bases -
XX
PS   Claim 13; Page 28-30; 104pp; German.
XX
CC   The invention relates to a method for inhibiting expression of a target
CC   gene (ABL91658-ABL91797) in a cell by introducing at least one
CC   oligoribonucleotide that has a double-stranded structure consisting of at
CC   most 49 sequential nucleotide pairs, with at least part of one strand
CC   complementary with the target gene and has at least one end a
CC   single-stranded segment of 1-4 nt. The method provides
CC   oligoribonucleotides for antisense inhibition of gene expression useful
CC   e.g. for treating tumours but the oligoribonucleotides may also be
CC   directed against genes present in pathogens (e.g. Plasmodium or
CC   viruses/viroids, pathogenic on humans, animals or plants) or against
CC   cytokine, Id, developmental or prion genes. The method provides more
CC   effective inhibition of gene expression than use of known
CC   oligonucleotides, probably because the unpaired overhang increases
CC   stability and thus intracellular concentration.
XX

XX
CC   This sequence represents cDNA encoding human wild-type
CC   multidrug resistance protein MDR-1. MDR-1 is a transmembrane
CC   efflux pump, responsible for the export of drugs from cells,
CC   particularly cancer cells. Wild-type MDR-1 shows increased
CC   resistance to etoposide and decreased resistance to vinca
CC   alkaloids compared with a mutant form (AAY58187) where the Gly at
CC   position 185 is replaced by Val. The invention relates to transducing
CC   haematopoietic stem cells with nucleic acid encoding an MDR protein
CC   and culturing the modified cells. The modified haematopoietic stem
CC   cells are useful in bone marrow transplantation (to reconstitute
CC   haematopoietic systems in patients who have undergone chemotherapy or
CC   radiation therapy) and in ex vivo gene therapy of genetic defects in
CC   cells derived from haematopoietic stem cells, e.g., thalassaemia,
CC   Gauchier's disease, sickle cell anaemia or leukaemia. The modified
CC   cells can also be used to identify factors involved in regulating
CC   proliferation and differentiation in haematopoietic stem cells.
CC   Haematopoietic stem cells that express MDR-1 will be protected against
CC   chemotherapeutic agents, so can be engrafted while the patient is
CC   undergoing chemotherapy. Expansion of (rare) haematopoietic stem cells
CC   provides sufficient cells to permit standard biochemical analysis.
CC   Overexpression of MDR-1 allows cytokine-driven expansion of
CC   haematopoietic stem cells by at least 10-fold compared with a maximum
CC   of 4-fold in known procedures.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

            Physical and Chemical Research (RIKEN), Laboratory for Genome
            Exploration Research Group, RIKEN Gemomic Sciences Center (GSC),
            RIKEN Yokohama Institute; 1-7-22 Suehiro-cho, Tsurumi-ku, Yokohama,
            Kanagawa 230-0045, Japan (E-mail:genome-res@gsc.riken.go.jp,
            URL:http://genome.gsc.riken.go.jp/, Tel:81-45-503-9222,
            Fax:81-45-503-9216)
COMMENT     Please visit our web site (http://genome.gsc.riken.go.jp/) for
            further details.
            cDNA library was prepared and sequenced in Mouse Genome
            Encyclopedia Project of Genome Exploration Research Group in Riken
            Genomic Sciences Center and Genome Science Laboratory in RIKEN.
            Division of Experimental Animal Research in Riken contributed to
            prepare mouse tissues. First strand cDNA was primed with a primer
            [5' GAGAGAGAGAAGGATCCAAGAGCTCTTTTTTTTTTTTTTTTTVN 3'], cDNA was
            prepared by using trehalose thermo-activated reverse transcriptase
            and subsequently enriched for full-length by cap-trapper. Second
            strand cDNA was prepared with the primer adapter of sequence [5'
            GAGAGAGAGATTCTCGAGTTAATTAAATTAATCCCCCCCCCCCC 3']. cDNA was cleaved
            with BamHI and XhoI. cDNA of size comprised between 3 and 7 kb was
            selected before cloning. Vector: a modified pBluescript KS(+) after
            bulk excision from Lambda FLC I. Cloning sites, 5' end: SalI; 3'
            end: BamHI. Host: DH10B.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

     Pred. No. is the number of results predicted by chance to have a
     score greater than or equal to the score of the result being printed,
     and is derived by analysis of the total score distribution.
```

RESULT 3
US-09-873-409-14
; Sequence 14, Application US/09873409
; Patent No. US20020037522A1
; GENERAL INFORMATION:
;  APPLICANT: Frank, Markus
;  APPLICANT:  Sayegh, Mohamed
;  TITLE OF INVENTION: A Gene Encoding a Multidrug Resistance Human P-Glycoprotein
;  TITLE OF INVENTION:  Homologue on Chromosome 7p15-21 and Uses Thereof
;  FILE REFERENCE: 81994/268611
;  CURRENT APPLICATION NUMBER: US/09/873,409
;  CURRENT FILING DATE:  2001-06-05
;  NUMBER OF SEQ ID NOS: 19
;  SOFTWARE: PatentIn version 3.0
; SEQ ID NO 14
;   LENGTH: 3621
;   TYPE: DNA
;   ORGANISM: Homo sapiens
US-09-873-409-14

US-09-866-866A-7
; Sequence 7, Application US/09866866A
; Patent No. US20020102244A1
; GENERAL INFORMATION:
; APPLICANT: Sorrentino, Brian
; APPLICANT: Schuetz, John
; TITLE OF INVENTION: A Method of Identifying and/or Isolating Stem Cells
; FILE REFERENCE: 1340-1-021CIP2
; CURRENT APPLICATION NUMBER: US/09/866,866A
; CURRENT FILING DATE: 2001-08-30
; PRIOR APPLICATION NUMBER: 09/584,586
; PRIOR FILING DATE: 2000-05-31
; PRIOR APPLICATION NUMBER: PCT/US99/11825
; PRIOR FILING DATE: 1999-05-27
; PRIOR APPLICATION NUMBER: 60/086,988
; PRIOR FILING DATE: 1998-05-28
; NUMBER OF SEQ ID NOS: 27
; SOFTWARE: PatentIn version 3.0
; SEQ ID NO 7
;   LENGTH: 4788
;   TYPE: DNA
;   ORGANISM: Mus musculus
US-09-866-866A-7

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 13
MUSMDRA
LOCUS       MUSMDRA                 4084 bp    mRNA    linear   ROD 27-APR-1993
DEFINITION  Mouse mdr gene encoding a multidrug resistance protein mRNA,
            complete cds.
ACCESSION   J03398
VERSION     J03398.1  GI:199109
KEYWORDS    multidrug resistance protein.
SOURCE      Mouse (strain BALB/c) pre-B-cell (cell line 702/3), cDNA to mRNA,
            clone MDR2.
  ORGANISM  Mus musculus
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
            Mammalia; Eutheria; Rodentia; Sciurognathi; Muridae; Murinae; Mus.
REFERENCE   1  (bases 1 to 4084)
  AUTHORS   Gros,P., Raymond,M., Bell,J. and Housman,D.
  TITLE     Cloning and characterization of a second member of the mouse mdr
            gene family
  JOURNAL   Mol. Cell. Biol. 8 (7), 2770-2778 (1988)
  MEDLINE   88302195
   PUBMED   3405218
REFERENCE   2  (sites)
  AUTHORS   Raymond,M. and Gros,P.
  TITLE     Mammalian multidrug-resistance gene: correlation of exon
            organization with structural domains and duplicaticn of an
            ancestral gene
  JOURNAL   Proc. Natl. Acad. Sci. U.S.A. 86 (17), 6488-6492 (1989)
  MEDLINE   89367274
   PUBMED   2570420
REFERENCE   3  (sites)
  AUTHORS   Raymond,M. and Gros,P.
  TITLE     Cell-specific activity of cis-acting regulatory elements in the
            promoter of the mouse multidrug resistance gene mdr1
  JOURNAL   Mol. Cell. Biol. 10 (11), 6036-6040 (1990)
  MEDLINE   91042535
   PUBMED   2248681
COMMENT     Submitted in computer readable form by P.Gros 08-JUL-1988.

LOCUS       GGA9799                 4018 bp    mRNA    linear   VRT 03-MAR-1999
DEFINITION  Gallus gallus mRNA for ABC transporter protein.
ACCESSION   AJ009799
VERSION     AJ009799.1  GI:3355756
KEYWORDS    ABC transporter protein; cmdr1 gene; P-glycoprotein.
SOURCE      Gallus gallus.
  ORGANISM  Gallus gallus
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
            Archosauria; Aves; Neognathae; Galliformes; Phasianidae;
            Phasianinae; Gallus.

LOCUS       OAU78609                3858 bp    mRNA    linear   MAM 11-OCT-2001
DEFINITION  Ovis aries multidrug resistance protein-1 (mdr1) mRNA, complete
            cds.
ACCESSION   U78609
VERSION     U78609.1  GI:2149086
KEYWORDS    .
SOURCE      Ovis aries.
  ORGANISM  Ovis aries
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
            Mammalia; Eutheria; Cetartiodactyla; Ruminantia; Pecora; Bovoidea;
            Bovidae; Caprinae; Ovis.
REFERENCE   1  (bases 1 to 3858)
  AUTHORS   Longley,M., Phua,S.H., van Stijn,T.C. and Crawford,A.M.
  TITLE     Isolation and mapping of the first ruminant multidrug resistance
            genes
  JOURNAL   Anim. Genet. 30 (3), 207-210 (1999)
  MEDLINE   99371931
   PUBMED   10442984
REFERENCE   2  (bases 1 to 3858)
  AUTHORS   Longley,M. and Crawford,A.M.
  TITLE     Direct Submission
  JOURNAL   Submitted (18-NOV-1996) Biochemistry Department, University of
            Otago, Dunedin, New Zealand

PT   New transporters and ion channels (TRICH) polypeptides, useful for
PT   diagnosing, preventing, and treating disorders associated with an
PT   abnormal expression or activity of TRICH, e.g. immunological, muscular
PT   or renal disorders  -
XX
PS   Claim 5; Page 172; 178pp; English.
XX
CC   The invention relates to human transporters and ion channels (TRICH)
CC   polypeptides, a naturally occurring amino acid sequence 90 % identical to
CC   TRICH, a biologically active fragment of TRICH or an immunogenic fragment
CC   of TRICH. Also included are an isolated polynucleotide encoding TRICH,
CC   a recombinant polynucleotide comprising a promoter sequence operably
CC   linked to the TRICH polynucleotide, a cell transformed with the
CC   recombinant polynucleotide, a transgenic organism comprising the
CC   recombinant polynucleotide, an isolated antibody that binds specifically
CC   to TRICH, and screening for compounds which bind to TRICH, modulate
CC   TRICH, modulate TRICH expression or are ant/agonists of TRICH.
CC   The polypeptides are useful for diagnosing, treating, and
CC   preventing transport, neurological, muscle, immunological disorders
CC   (e.g. scleroderma, systemic lupus erythematosus, allergies), cell
CC   proliferative disorders such as cancers (e.g. leukaemia, cervical or
CC   breast cancers), neurodegenerative disorders (e.g. Parkinson's disease,
CC   Alzheimer's disease), muscular disorders (e.g. myotonic dystrophy,
CC   catatonia), endocrine disorders (e.g. diabetes, Grave's disease),
CC   gastrointestinal disorders (e.g. Crohn's disease), renal disorders
CC   (e.g. Good pasture's syndrome), viral, bacterial, fungal, parasitic,
CC   protozoal and helminthic infections, cardiovascular disorders (e.g.
CC   atherosclerosis), or hepatic diseases (e.g. cirrhosis) and many
CC   other diseases and disorders detailed in the specification. They can also
CC   be used in assessing the effects of exogenous compounds on the
CC   expression of nucleic acid and amino acid sequences of transporters and
CC   ion channels. TRICH or its fragments may also be used in screening for
CC   compounds that specifically bind to and modulate the activity of TRICH.
CC   The polynucleotides can be used to create knock-in humanised animals or
CC   transgenic animals to model human disease. The present sequence
CC   encodes a TRICH protein.

PT   Adenosine triphosphate binding proteins useful for identifying agents
PT   for treating atherosclerosis and other inflammatory disorders -
XX
PS   Claim 9; Page 117-119; 154pp; English.
XX
CC   The present sequence is that of human ATP binding cassette
CC   subfamily B protein ABCB4 cDNA.  The cDNA was identified using a
CC   differential display method in which monocytes from peripheral
CC   blood were subjected to macrophage differentiation and cholesterol
CC   loading with acetylated low density lipoproteins and subsequent
CC   deloading with high density lipoprotein (HDL3) to identify
CC   cholesterol sensitive genes.  The gene maps to chromosome 7q21
CC   and is also termed MDR3 (multidrug resistance).  The invention
CC   provides cholesterol-sensitive ABC genes (see AAZ94734-63).  These
CC   genes, and polypeptides encoded by them, can be used for diagnostic
CC   and therapeutic applications, and for biochemical or cell-based
CC   assays to screen for pharmacologically active modulator compounds
CC   useful for the treatment of lipid disorders, atherosclerosis or
CC   other inflammatory diseases such as psoriasis and lupus
CC   erythematosus.

PT   Using phosphatidylcholine having mucous membrane protective activity to
PT   prevent or treat large intestinal diseases, such as ulcerative colitis
PT   or pouchitis  -
XX
PS   Disclosure; Page 17-22; 22pp; German.
XX
CC   This invention describes a novel medicament containing a therapeutically
CC   effective amount of phosphatidylcholine to treat diseases, where
CC   phosphatidylcholine has an advantageous mucous membrane protective
CC   activity in the large intestine. The invention describes (1) a method
CC   to regulate presence or absence of MDR(multidrug resistance)-3
CC   transcription in a sample from patients with suspicion of stomach and
CC   colon diseases, where treatment with phosphatidylcholine is indicated;
CC   (2) a diagnostic test, to detect ulcerative colitis, pouchitis, large
CC   intestinal inflammation, Crohn's disease, diverse colitis, infectious
CC   enteritis/colitis, inflammation through X-ray treatment, antibiotics,
CC   chemotherapeutics, drugs or chemicals or large intestinal carcinoma,
CC   contains MDR3-specific primers to detect mutations in the MDR3 gene
CC   family and their interactions partners (in particular transcription
CC   factors); and (3) a method to manufacture a medicament for local gene
CC   therapy in the ileum with the ideal MDR3-analogous genes for patients
CC   with missing or decreased expression of MDR3-analogous proteins. The
CC   products of the invention have anti-ulcer, anti-inflammatory and
CC   cytostatic activity. The orally administered delayed-release form of
CC   phosphatidylcholine prevents premature resorption and provides for
CC   targeted release in the lower section of the small or large intestine.
CC   This sequence encodes the human MDR-3 protein described in the method of
CC   the invention.

PT   Diagnosing and detecting the progression of liver cancer,
PT   hepatocellular carcinoma or metastatic liver tumor in a patient,
PT   involves detecting the level of expression of two or more genes in a
PT   liver tissue sample  -
XX
PS   Claim 1; SEQ ID NO 2299; 298pp; English.
XX
CC   The invention relates to a novel method for diagnosing and detecting the
CC   progression of liver cancer, hepatocellular carcinoma or metastatic liver
CC   tumour in a patient, and differentiating metastatic liver cancer from
CC   hepatocellular carcinoma in a patient, involving detecting the level of
CC   expression of two or more genes represented in ABN93503-ABN97455 in a
CC   tissue sample. The method of the invention has hepatotropic, and
CC   cytostatic activity. The method is useful for diagnosing and detecting
CC   the progression of liver cancer, hepatocellular carcinoma and metastatic
CC   liver carcinoma in a patient. The method is useful for identifying
CC   expression profiles which serve as useful diagnostic markers as well as
CC   markers that can be used to monitor disease states, disease progression,
CC   drug toxicity, drug efficacy and drug metabolism.
CC   Note: The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences.

PT   Predicting toxic effects of compounds or the progression of these toxic
PT   effects by determining the changes in gene expression in tissues or
PT   cells exposed to the toxin and comparing these to gene expression in
PT   unexposed tissues or cells -
XX
PS   Claim 1; Seq ID No 1560; 239pp; English.
XX
CC   The invention relates to methods for predicting toxic effects of
CC   compounds or the progression of these toxic effects by determining the
CC   global changes in gene expression in tissues or cells exposed to the
CC   toxin and comparing these to gene expression in unexposed tissues or
CC   cells. Also included are methods of predicting at least one toxic
CC   effect of a compound or progression of a toxic effect, preferably the
CC   hepatotoxicity of a compound, comprising detecting the level of
CC   expression in a tissue or cell sample exposed to the compound of two or
CC   more genes listed in the specification, where differential expression of
CC   the genes is indicative of at least one toxic effect or progression.
CC   The method can also be used to identify an agent which modulates the
```

```
CC   toxic response and predict cellular pathways that a compound modulates
CC   in a cell. The methods utilise a set of at least two probes (on a solid
CC   support in kit form), where each of the probes comprises a sequence that
CC   specifically hybridises to a gene listed in the specification, a computer
CC   system comprising a database containing information identifying the
CC   expression level in a tissue or cell sample exposed to a hepatotoxin of a
CC   set of genes comprising at least two genes listed in the specification,
CC   and a user interface to view the information used to present information
CC   identifying the expression level in a tissue or cell of at least one gene
CC   listed in the specification. The method is useful for elucidating global
CC   changes in gene expression and for identifying toxicity markers in
CC   tissues or cell exposed to a known toxin. The genes may be used as
CC   toxicity markers in drug screening and toxicity assays. The genes and
CC   gene expression information may be used as diagnostic markers for the
CC   prediction or identification of the physiological state of tissue or cell
CC   sample that has been exposed to a compound or agent. Hepatotoxicity
CC   is characterised by centrilobular necrosis and steatosis. The present
CC   sequence is an expressed sequence tag (EST) or cDNA derived from a gene
CC   which is differentially expressed in response to a hepatotoxic agent.

XX
PS   Claim 2; Page 23-24; 33pp; English.
XX
CC   The present cDNA sequence encodes rat multidrug resistance
CC   protein 1a (mdr1a). This protein is a member of the multi-specific drug
CC   transporters family. Mdr1a is used in assays to provide information on
CC   drug formulation, selection of formulation excipients and compound
CC   design. They are used in cell based, membrane based, binding or other
CC   assays to provide information that may enhance drug formulation. This
CC   invention further relates to the generation of in vivo and in vitro
CC   comparison data to predict oral absorption and pharmacokinetics. This
CC   enables the selection of drugs with optimal pharmacokinetics, i.e. good
CC   oral bioavailability, brain penetration, plasma half life, and minimum
CC   drug interaction. Transgenic and knock-out animals created using rat
CC   mdr1a provides an insight into treating and preventing human diseases
CC   including cancer, inflammation, cardiovascular disease, central nervous
CC   system disorders, auto-immune and kidney disease.

PS   Claim 11; Page 27-29; 33pp; English.
XX
CC   The present cDNA sequence encodes rat multidrug resistance protein 1a
CC   (mdr1a). This cDNA is derived from EST (expressed sequence tag)
CC   sequences. Mdr1a is used in assays to provide information on
CC   drug formulation, selection of formulation excipients and compound
CC   design. They are used in cell based, membrane based, binding or other
CC   assays to provide information that may enhance drug formulation. This
CC   invention further relates to the generation of in vivo and in vitro
CC   comparision data to predict oral absorption and pharmacokinetics. This
CC   enables the selection of drugs with optimal pharmacokinetics, i.e. good
CC   oral bioavailability, brain penetration, plasma half life, and minimum
CC   drug interaction. Transgenic and knock-out animals created using rat
CC   mdr1a provides an insight into treating and preventing human diseases
CC   including cancer, inflammation, cardiovascular disease, central nervous
CC   system disorders, auto-immune and kidney disease.

XX
CC   This invention relates to a polynucleotide sequence encoding a
CC   cynomologous monkey P-glycoprotein (PGP), and an allelic variant of the
CC   PGP protein. PGP, also known as multidrug transporter, MDR1 is a member
CC   of the ABC transporter superfamily. The enzyme serves as an efflux pump
CC   exporting small molecules across the cell membrane. The invention
CC   includes a cynomologous monkey (Macaca fascicularis) PGP coding sequence
CC   and protein, and also that of an allelic variant. The PGP polynucleotide
CC   sequence is useful for increasing PGP transporter activity in a cell.
CC   Antisense sequences of the cDNA are useful for inhibiting PGP transport
CC   activity in a mammalian cell. They may also be used for increasing the
CC   bioavailability of a drug. The present sequence represents cDNA encoding
CC   cynomologous monkey P-glycoprotein.

PT   Novel isolated nucleic acid encoding cynomologous monkey P-glycoprotein
PT   (PGP) and homologous PGP polypeptides are useful for predicting
PT   bioavailability of compound and increasing PGP transporter activity in
PT   cell  -
XX
PS   Example 1; Page 59-65; 84pp; English.
XX
CC   This invention relates to a polynucleotide sequence encoding a
CC   cynomologous monkey P-glycoprotein (PGP), and an allelic variant of the
CC   PGP protein. PGP, also known as multidrug transporter, MDR1 is a member
CC   of the ABC transporter superfamily. The enzyme serves as an efflux pump
CC   exporting small molecules across the cell membrane. The invention
CC   includes a cynomologous monkey (Macaca fascicularis) PGP coding sequence
CC   and protein, and also that of an allelic variant. The PGP polynucleotide
CC   sequence is useful for increasing PGP transporter activity in a cell.
CC   Antisense sequences of the cDNA are useful for inhibiting PGP transport
CC   activity in a mammalian cell. They may also be used for increasing the
CC   bioavailability of a drug. The present sequence represents cDNA encoding
CC   cynomologous monkey P-glycoprotein. This sequence contains a 9 nucleotide
CC   insert compared to the PGP allelic variant given in AAF86127.

XX
CC This gene is used as an example of a target DNA in a method for the
CC amplification of nucleic acid sequences in a mixture using various
CC DNA probes/primers. The method may be used to detect a mutation or
CC allele in the target, e.g. that that causes a genetic disease.

CC   This sequence represents the multidrug resistance gene (MDR-1) amplified
CC   by the primers shown in AAT43320 and AAT43321. This sequence can be used
CC   as a target in the method of the invention, for enzymatically amplifying
CC   a target nucleic acid (TNA) sequence contained in a nucleic acid or
CC   mixture of nucleic acids while avoiding strand displacement by
CC   polymerase. The method comprises using three primers, one complementary
CC   to a first segment of the TNA, a second complementary to a second segment
CC   of the TNA, which is adjacent to the first primer, and a third which is
CC   similar to the first segment of the TNA, and is complementary to a
CC   portion of the first primer. The first two primers are hybridised to the
CC   TNA, and a fused amplification product is created from the TNA using
CC   these two primers. The fused product is dissociated, and hybridised to
CC   the third primer, which is then extended. The extended modified
CC   amplification product is hybridised to the first two primers, and these
CC   two primers are ligated. Each of the primers may be labelled using a
CC   different label so that the method can be used to detect the presence of
CC   a mutation or allele by detecting whether the labelled primer is
CC   contained within the fused amplification product or the extended
CC   amplification product. The method of the invention combines certain
CC   aspects of ligase chain reaction (LCR) and polymerase chain reaction
CC   (PCR), but is improved compared to LCR due to the reduced number of
CC   primers needed, and the fact that the entire TNA sequence does not need
CC   to be known.

PT   Inhibiting gene expression in cells, useful for e.g. treating tumors,
PT   by introducing double-stranded complementary oligoRNA having unpaired
PT   terminal bases  -
XX
PS   Claim 13; Page 28-30; 104pp; German.
XX
CC   The invention relates to a method for inhibiting expression of a target
CC   gene (ABL91658-ABL91797) in a cell by introducing at least one
CC   oligoribonucleotide that has a double-stranded structure consisting of at
CC   most 49 sequential nucleotide pairs, with at least part of one strand
CC   complementary with the target gene and has at least one end a
CC   single-stranded segment of 1-4 nt. The method provides
CC   oligoribonucleotides for antisense inhibition of gene expression useful
CC   e.g. for treating tumours but the oligoribonucleotides may also be
CC   directed against genes present in pathogens (e.g. Plasmodium or
CC   viruses/viroids, pathogenic on humans, animals or plants) or against
CC   cytokine, Id, developmental or prion genes. The method provides more
CC   effective inhibition of gene expression than use of known
CC   oligonucleotides, probably because the unpaired overhang increases
CC   stability and thus intracellular concentration.

PT   Ex vivo expansion of hematopoietic stem cells transduced with a
PT   sequence encoding human multidrug resistance-1, used for bone marrow
PT   transplantation -
XX
PS   Claim 10; Page 68-70; 113pp; English.
XX
CC   This sequence represents cDNA encoding human wild-type
CC   multidrug resistance protein MDR-1. MDR-1 is a transmembrane
CC   efflux pump, responsible for the export of drugs from cells,
CC   particularly cancer cells. Wild-type MDR-1 shows increased
CC   resistance to etoposide and decreased resistance to vinca
CC   alkaloids compared with a mutant form (AAY58187) where the Gly at
CC   position 185 is replaced by Val. The invention relates to transducing
CC   haematopoietic stem cells with nucleic acid encoding an MDR protein
CC   and culturing the modified cells. The modified haematopoietic stem
CC   cells are useful in bone marrow transplantation (to reconstitute
CC   haematopoietic systems in patients who have undergone chemotherapy or
CC   radiation therapy) and in ex vivo gene therapy of genetic defects in
CC   cells derived from haematopoietic stem cells, e.g., thalassaemia,
CC   Gauchier's disease, sickle cell anaemia or leukaemia. The modified
CC   cells can also be used to identify factors involved in regulating
CC   proliferation and differentiation in haematopoietic stem cells.
CC   Haematopoietic stem cells that express MDR-1 will be protected against
CC   chemotherapeutic agents, so can be engrafted while the patient is
CC   undergoing chemotherapy. Expansion of (rare) haematopoietic stem cells
CC   provides sufficient cells to permit standard biochemical analysis.
CC   Overexpression of MDR-1 allows cytokine-driven expansion of
CC   haematopoietic stem cells by at least 10-fold compared with a maximum
CC   of 4-fold in known procedures.

XX
CC   This sequence represents cDNA encoding human G185V mutant multidrug
CC   resistance protein MDR-1, where the the Gly residue at postion 185
CC   of the wild-type protein (AAY58186) is replaced by Val. MDR-1 is a
CC   transmembrane efflux pump, responsible for the export of drugs from
CC   cells, particularly cancer cells. The wild-type MDR-1 shows increased
CC   resistance to etoposide and decreased resistance to vinca alkaloids
CC   compared with the G185V mutant. The invention relates to transducing
CC   haematopoietic stem cells with nucleic acid encoding an MDR protein
CC   and culturing the modified cells. The modified haematopoietic stem
CC   cells are useful in bone marrow transplantation (to reconstitute
CC   haematopoietic systems in patients who have undergone chemotherapy or
CC   radiation therapy) and in ex vivo gene therapy of genetic defects in
CC   cells derived from haematopoietic stem cells, e.g., thalassaemia,
CC   Gauchier's disease, sickle cell anaemia or leukaemia. The modified
CC   cells can also be used to identify factors involved in regulating
CC   proliferation and differentiation in haematopoietic stem cells.
CC   Haematopoietic stem cells that express MDR-1 will be protected against
CC   chemotherapeutic agents, so can be engrafted while the patient is
CC   undergoing chemotherapy. Expansion of (rare) haematopoietic stem cells
CC   provides sufficient cells to permit standard biochemical analysis.
CC   Overexpression of MDR-1 allows cytokine-driven expansion of
CC   haematopoietic stem cells by at least 10-fold compared with a maximum
CC   of 4-fold in known procedures.

COMMENT     Please visit our web site (http://genome.gsc.riken.go.jp/) for
            further details.
            cDNA library was prepared and sequenced in Mouse Genome
            Encyclopedia Project of Genome Exploration Research Group in Riken
            Genomic Sciences Center and Genome Science Laboratory in RIKEN.
            Division of Experimental Animal Research in Riken contributed to
            prepare mouse tissues. First strand cDNA was primed with a primer
            [5' GAGAGAGAGAAGGATCCAAGAGCTCTTTTTTTTTTTTTTTTVN 3'], cDNA was
            prepared by using trehalose thermo-activated reverse transcriptase
            and subsequently enriched for full-length by cap-trapper. Second
            strand cDNA was prepared with the primer adapter of sequence [5'
            GAGAGAGAGATTCTCGAGTTAATTAAATTAATCCCCCCCCCCCC 3']. cDNA was cleaved
            with BamHI and XhoI. cDNA of size comprised between 3 and 7 kb was
            selected before cloning. Vector: a modified pBluescript KS(+) after
            bulk excision from Lambda FLC I. Cloning sites, 5' end: SalI; 3'
            end: BamHI. Host: DH10B.

      Pred. No. is the number of results predicted by chance to have a
      score greater than or equal to the score of the result being printed,
      and is derived by analysis of the total score distribution.
```

      Pred. No. is the number of results predicted by chance to have a
      score greater than or equal to the score of the result being printed,
      and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

     Pred. No. is the number of results predicted by chance to have a
     score greater than or equal to the score of the result being printed,
     and is derived by analysis of the total score distribution.

                     /note="Vector: pSPORT1; Site_1: NotI; Site_2: SalI; 1st
                     strand cDNA was primed with a Not I - oligo(dT)15 primer
                     [5'pGACTAGTTCTAGATCGCGAGCGGCCGCCCTTTTTTTTTTTTTTT3'];
                     double-stranded cDNA was ligated to Sal I adaptors (BRL),
                     digested with Not I and cloned into the Not I and Sal I
                     sites of the pSPORT1 vector (BRL). Library was constructed
                     by Matthew Clark (Lehrach lab; ICRF, London and Max Planck
                     Institut fuer Molekulare Genetik,Berlin). cDNAs for EST
                     analysis were selected following oligonucleotide
                     hybridization fingerprinting of arrayed clones from
                     zebrafish late somitogenesis (26 ss), adult liver or
                     embryonic shield stage (5.6 h) libraries.  Fingerprint
                     data were used to computationally cluster cDNAs, and a
                     single cDNA from each cluster was chosen for sequencing.
                     In some cases multiple members of the same cluster were
                     sequenced to assess clustering parameters or single clones
                     were sequenced additional times to assess quality
                     control."

                     /sex="mixed"
                     /tissue_type="26 somite embryos, adult livers, shield
                     stage embryos"
                     /lab_host="XL1-blue MRF"
                     /note="Vector: pSPORT1; Site_1: NotI; Site_2: SalI; 1st
                     strand cDNA was primed with a Not I - oligo(dT)15 primer
                     [5'pGACTAGTTCTAGATCGCGAGCGGCCGCCCTTTTTTTTTTTTTTT3'];
                     double-stranded cDNA was ligated to Sal I adaptors (BRL),
                     digested with Not I and cloned into the Not I and Sal I
                     sites of the pSPORT1 vector (BRL). Library was constructed
                     by Matthew Clark (Lehrach lab; ICRF, London and Max Planck
                     Institut fuer Molekulare Genetik,Berlin). cDNAs for EST
                     analysis were selected following oligonucleotide
                     hybridization fingerprinting of arrayed clones from
                     zebrafish late somitogenesis (26 ss), adult liver or
                     embryonic shield stage (5.6 h) libraries.  Fingerprint
                     data were used to computationally cluster cDNAs, and a
                     single cDNA from each cluster was chosen for sequencing.
                     In some cases multiple members of the same cluster were
                     sequenced to assess clustering parameters or single clones
                     were sequenced additional times to assess quality
                     control."

      Pred. No. is the number of results predicted by chance to have a
      score greater than or equal to the score of the result being printed,
      and is derived by analysis of the total score distribution.

PT   New transporters and ion channels (TRICH) polypeptides, useful for
PT   diagnosing, preventing, and treating disorders associated with an
PT   abnormal expression or activity of TRICH, e.g. immunological, muscular
PT   or renal disorders  -
XX
PS   Claim 5; Page 172; 178pp; English.
XX
CC   The invention relates to human transporters and ion channels (TRICH)
CC   polypeptides, a naturally occurring amino acid sequence 90 % identical to
CC   TRICH, a biologically active fragment of TRICH or an immunogenic fragment
CC   of TRICH. Also included are an isolated polynucleotide encoding TRICH,
CC   a recombinant polynucleotide comprising a promoter sequence operably
CC   linked to the TRICH polynucleotide, a cell transformed with the
CC   recombinant polynucleotide, a transgenic organism comprising the
CC   recombinant polynucleotide, an isolated antibody that binds specifically
CC   to TRICH, and screening for compounds which bind to TRICH, modulate
CC   TRICH, modulate TRICH expression or are ant/agonists of TRICH.
CC   The polypeptides are useful for diagnosing, treating, and
CC   preventing transport, neurological, muscle, immunological disorders
CC   (e.g. scleroderma, systemic lupus erythematosus, allergies), cell
CC   proliferative disorders such as cancers (e.g. leukaemia, cervical or
CC   breast cancers), neurodegenerative disorders (e.g. Parkinson's disease,
CC   Alzheimer's disease), muscular disorders (e.g. myotonic dystrophy,
CC   catatonia), endocrine disorders (e.g. diabetes, Grave's disease),
CC   gastrointestinal disorders (e.g. Crohn's disease), renal disorders
CC   (e.g. Good pasture's syndrome), viral, bacterial, fungal, parasitic,
CC   protozoal and helminthic infections, cardiovascular disorders (e.g.
CC   atherosclerosis), or hepatic diseases (e.g. cirrhosis) and many
CC   other diseases and disorders detailed in the specification. They can also
CC   be used in assessing the effects of exogenous compounds on the
CC   expression of nucleic acid and amino acid sequences of transporters and
CC   ion channels. TRICH or its fragments may also be used in screening for
CC   compounds that specifically bind to and modulate the activity of TRICH.
CC   The polynucleotides can be used to create knock-in humanised animals or
CC   transgenic animals to model human disease. The present sequence
CC   encodes a TRICH protein.

PT   Isolated polynucleotide encoding a rat mdr1b2 drug transporter
PT   polypeptide, useful for treatment of e.g. cancer, autoimmune disease,
PT   central nervous system disorders  -
XX
PS   Claim 7; Column 13-17; 17pp; English.
XX
CC   This sequence represents a polynucleotide encoding a 1275 amino acid
CC   rat mdr1b2 multispecific drug transporter polypeptide. The mdr1b2
```

```
CC   nucleotide sequence has cytostatic, antiinflammatory, cardiant,
CC   neuroprotective, immunosuppressive and nephrotropic activity.
CC   Understanding the functioning of the mdr1b2 polynucleotide and protein in
CC   transgenic animal models is useful for treating and preventing diseases
CC   such as cancer, inflammation, cardiovascular disease, central nervous
CC   system disorders, autoimmune disease, and kidney disease. The use of the
CC   protein in cell based, membrane based, or binding assays may enhance drug
CC   formulation, selection of formulation excipients and compound design.

PT   New rat multidrug resistance protein (mdr1b2), useful for screening or
PT   identifying compounds that are (ant)agonists/inhibitors of the
PT   ratmdr1b2, as well as compounds with optimal development
PT   characteristics  -
XX
PS   Disclosure; Column 13-14; 13pp; English.
XX
CC   The invention relates to a novel rat multidrug resistance (mdr)
CC   protein, mdr1b2 (AAB60409). Multi-specific drug transporter family
CC   proteins are present in cell which have a barrier function, such as
CC   intestinal epithelial cells, brain microvessel endothelial cells,
CC   kidney epithelial cells, and liver hepatocytes, and are also expressed
CC   by certain cancer cells. The rat mdr1b2 protein is useful for
CC   screening or identifying compounds that are agonists or antagonists
CC   of mdr1b2 activity. It may also be used to establish assays to
CC   predict oral absorption and pharmacokinetics of drugs in humans, and
CC   thus enhance the design of formulations through the identification of
CC   compounds with optimal development characteristics (i.e., high oral
CC   bioavailability, UID (once a day) dosing, reduced drug interactions,
CC   reduced variability, and reduced food effects), specifically to
CC   avoid interactions with human mdr-1. Transgenic and knockout animals
CC   created using DNA encoding the rat mdr1b2 may be used to gain an
CC   insight into treating and preventing human diseases such as cancer,
CC   inflammation, cardiovascular disease, central nervous system disorders,
CC   autoimmune disorders and kidney disease. The present sequence represents
CC   cDNA encoding rat mdr1b2.

PT   New dog P-glycoproteins (PGP) and their encoding nucleic acids, useful
PT   for determining the bioavailability of drugs and for screening for dog
PT   PGP inhibitors -
XX
PS   Claim 3; Page 58-63; 111pp; English.
XX
CC   The invention relates to dog P-glycoprotein (PGP) also referred
CC   as multidrug transporter (MDR1) and nucleic acids encoding them.
CC   The invention also includes fragments and biologically functional
CC   variants of dog P-glycoprotein. PGP and their nucleic acids are
CC   useful for determining the bioavailability of drugs and for
CC   screening PGP inhibitors. They are useful for the diagnosis and
CC   treatment of conditions characterised by PGP activity, by
CC   reducing or increasing PGP activity in a cell. PGP nucleic acids
CC   are used as oligonucleotide probes. Complements of PGP nucleic
CC   acids are useful as antisense oligonucleotides, to induce a PGP
CC   'knockout' phenotype. They are used to prepare a non-human
CC   transgenic animal, which are valuable as genetic models for
CC   human diseases.
CC   The present sequence is dog P-glycoprotein (PGP) cDNA. This
CC   sequence is also referred as Genotype C cDNA. The
CC   PGP enzyme functions as an efflux pump exporting small molecules
CC   across the cell membrane. This enzyme is a member of the ABC
CC   transporter family.

PT   New dog P-glycoproteins (PGP) and their encoding nucleic acids, useful
PT   for determining the bioavailability of drugs and for screening for dog
PT   PGP inhibitors -
XX
PS   Claim 9; Page 102-107; 111pp; English.
XX
CC   The invention relates to dog P-glycoprotein (PGP) also referred
CC   as multidrug transporter (MDR1) and nucleic acids encoding them.
CC   The invention also includes fragments and biologically functional
CC   variants of dog P-glycoprotein. PGP and their nucleic acids are
CC   useful for determining the bioavailability of drugs and for
CC   screening PGP inhibitors. They are useful for the diagnosis and
CC   treatment of conditions characterised by PGP activity, by
CC   reducing or increasing PGP activity in a cell. PGP nucleic acids
CC   are used as oligonucleotide probes. Complements of PGP nucleic
CC   acids are useful as antisense oligonucleotides, to induce a PGP
CC   'knockout' phenotype. They are used to prepare a non-human
CC   transgenic animal, which are valuable as genetic models for
CC   human diseases.
CC   The present sequence is dog P-glycoprotein (PGP) allelic variant
CC   (Genotype D) cDNA. The PGP enzyme functions as an efflux pump
CC   exporting small molecules across the cell membrane. This enzyme
CC   is a member of the ABC transporter family.

PT   Ex vivo expansion of hematopoietic stem cells transduced with a
PT   sequence encoding human multidrug resistance-1, used for bone marrow
PT   transplantation -
XX
PS   Disclosure; Page 90-93; 113pp; English.
XX
CC   This sequence represents cDNA encoding murine multidrug
CC   resistance protein MDR-1. MDR-1 is a transmembrane
CC   efflux pump, responsible for the export of drugs from cells,
CC   particularly cancer cells. The invention relates to transducing
CC   haematopoietic stem cells with nucleic acid encoding an MDR protein
CC   and culturing the modified cells. The modified haematopoietic stem
CC   cells are useful in bone marrow transplantation (to reconstitute
CC   haematopoietic systems in patients who have undergone chemotherapy or
CC   radiation therapy) and in ex vivo gene therapy of genetic defects in
CC   cells derived from haematopoietic stem cells, e.g., thalassaemia,
CC   Gauchier's disease, sickle cell anaemia or leukaemia. The modified
CC   cells can also be used to identify factors involved in regulating
CC   proliferation and differentiation in haematopoietic stem cells.
CC   Haematopoietic stem cells that express MDR-1 will be protected against
CC   chemotherapeutic agents, so can be engrafted while the patient is
CC   undergoing chemotherapy. Expansion of (rare) haematopoietic stem cells
CC   provides sufficient cells to permit standard biochemical analysis.
CC   Overexpression of MDR-1 allows cytokine-driven expansion of
CC   haematopoietic stem cells by at least 10-fold compared with a maximum
CC   of 4-fold in known procedures.

PT   Identifying a stem cell, for treating e.g., muscular dystrophy,
PT   myocardial infarction, Parkinson's disease, or neurodegenerative
PT   disorders, comprises detecting the expression of an ATP transport
PT   protein (BCRP) by a cell  -
XX
PS   Disclosure; Page 64-66; 87pp; English.
XX
CC   The invention provides a method of identifying and/or isolating a stem
CC   cell that involves detecting the expression of an ATP transport protein
CC   containing a conserved ATP-binding cassette (BCRP) by a cell in a sample
CC   comprising stem cells. The isolated stem cells may be used in the
CC   treatment of diseases such as muscular dystrophy, degenerative liver
CC   disorder, myocardial infarction, Parkinson's disease, degenerative
CC   disorders of the brain, and for tissue regeneration or replacement.
CC   Haematopoietic cells can be used in bone marrow transplants (e.g., for
CC   treatment of leukemia) and for ex vivo gene therapy for treating blood
CC   diseases such as sickle cell anemia and thalassemia. The stem cells can
CC   also be used as cell targets in gene therapy protocols. The present
CC   sequence represents a sequence related to the BCRP for which no relevant
CC   information has been provided in the specification.

PT   DNA sequence which confers multi-drug resistance on sensitive
PT   mammalian cells - used to preserve bone marrow cells during
PT   chemotherapy to prevent infection
XX
PS   Claim 1; Fig 8; 22pp; English.
XX
CC   A cDNA library was constructed from mRNA which had been isolated
CC   from a drug-sensitive mouse cell-line. Two mouse cDNA molecules
CC   complementary to the mRNA species encoded by 2 related but distinct
CC   mdr genes were isolated and cloned. One of the cDNA clones (lambda
CC   DR11) is a full-length cDNA clone for one member of the mdr gene
CC   family. When incorporated into prokaryotic expression vector pDREX4
CC   (which allows high levels of transcription of the cDNA when
CC   introduced into mammalian cells), the clone was shown to confer the
CC   multidrug resistance phenotype upon transfection into drug-sensitive
CC   mammalian cells.

PT   Predicting toxic effects of compounds or the progression of these toxic
PT   effects by determining the changes in gene expression in tissues or
PT   cells exposed to the toxin and comparing these to gene expression in
PT   unexposed tissues or cells -
XX
PS   Claim 1; Seq ID No 1424; 239pp; English.
XX
CC   The invention relates to methods for predicting toxic effects of
CC   compounds or the progression of these toxic effects by determining the
CC   global changes in gene expression in tissues or cells exposed to the
CC   toxin and comparing these to gene expression in unexposed tissues or
CC   cells. Also included are methods of predicting at least one toxic
CC   effect of a compound or progression of a toxic effect, preferably the
CC   hepatotoxicity of a compound, comprising detecting the level of
CC   expression in a tissue or cell sample exposed to the compound of two or
CC   more genes listed in the specification, where  differential expression of
CC   the genes is indicative of at least one toxic effect or progression.
CC   The method can also be used to identify an agent which modulates the
CC   toxic response and predict cellular pathways that a compound modulates
CC   in a cell. The methods utilise a set of at least two probes (on a solid
CC   support in kit form), where each of the probes comprises a sequence that
CC   specifically hybridises to a gene listed in the specification, a computer
CC   system comprising a database containing information identifying the
CC   expression level in a tissue or cell sample exposed to a hepatotoxin of a
CC   set of genes comprising at least two genes listed in the specification,
CC   and a user interface to view the information used to present information
CC   identifying the expression level in a tissue or cell of at least one gene
CC   listed in the specification. The method is useful for elucidating global
CC   changes in gene expression and for identifying toxicity markers in
CC   tissues or cell exposed to a known toxin. The genes may be used as
CC   toxicity markers in drug screening and toxicity assays. The genes and
CC   gene expression information may be used as diagnostic markers for the
CC   prediction or identification of the physiological state of tissue or cell
CC   sample that has been exposed to a compound or agent. Hepatotoxicity
CC   is characterised by centrilobular necrosis and steatosis. The present
CC   sequence is an expressed sequence tag (EST) or cDNA derived from a gene
CC   which is differentially expressed in response to a hepatotoxic agent.

PT   cell  -
XX
PS   Example 1; Page 51-57; 84pp; English.
XX
CC   This invention relates to a polynucleotide sequence encoding a
CC   cynomologous monkey P-glycoprotein (PGP), and an allelic variant of the
CC   PGP protein. PGP, also known as multidrug transporter, MDR1 is a member
CC   of the ABC transporter superfamily. The enzyme serves as an efflux pump
CC   exporting small molecules across the cell membrane. The invention
CC   includes a cynomologous monkey (Macaca fascicularis) PGP coding sequence
CC   and protein, and also that of an allelic variant. The PGP polynucleotide
CC   sequence is useful for increasing PGP transporter activity in a cell.
CC   Antisense sequences of the cDNA are useful for inhibiting PGP transport
CC   activity in a mammalian cell. They may also be used for increasing the
CC   bioavailability of a drug. The present sequence represents cDNA encoding
CC   cynomologous monkey P-glycoprotein.

PS   Example 1; Page 59-65; 84pp; English.
XX
CC   This invention relates to a polynucleotide sequence encoding a
CC   cynomologous monkey P-glycoprotein (PGP), and an allelic variant of the
CC   PGP protein. PGP, also known as multidrug transporter, MDR1 is a member
CC   of the ABC transporter superfamily. The enzyme serves as an efflux pump
CC   exporting small molecules across the cell membrane. The invention
CC   includes a cynomologous monkey (Macaca fascicularis) PGP coding sequence
CC   and protein, and also that of an allelic variant. The PGP polynucleotide
CC   sequence is useful for increasing PGP transporter activity in a cell.
CC   Antisense sequences of the cDNA are useful for inhibiting PGP transport
CC   activity in a mammalian cell. They may also be used for increasing the
CC   bioavailability of a drug. The present sequence represents cDNA encoding
CC   cynomologous monkey P-glycoprotein. This sequence contains a 9 nucleotide
CC   insert compared to the PGP allelic variant given in AAF86127.

COMMENT     Please visit our web site (http://genome.gsc.riken.go.jp/) for
            further details.
            cDNA library was prepared and sequenced in Mouse Genome
            Encyclopedia Project of Genome Exploration Research Group in Riken
            Genomic Sciences Center and Genome Science Laboratory in RIKEN.
            Division of Experimental Animal Research in Riken contributed to
            prepare mouse tissues. First strand cDNA was primed with a primer
            [5' GAGAGAGAGAAGGATCCAAGAGCTCTTTTTTTTTTTTTTTTTVN 3'], cDNA was
            prepared by using trehalose thermo-activated reverse transcriptase
            and subsequently enriched for full-length by cap-trapper. Second
            strand cDNA was prepared with the primer adapter of sequence [5'
            GAGAGAGAGATTCTCGAGTTAATTAAATTAATCCCCCCCCCCCC 3']. cDNA was cleaved
            with BamHI and XhoI. cDNA of size comprised between 3 and 7 kb was
            selected before cloning. Vector: a modified pBluescript KS(+) after
            bulk excision from Lambda FLC I. Cloning sites, 5' end: SalI; 3'
            end: BamHI. Host: DH10B.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
LOCUS       CRUPGP1185            3987 bp    mRNA    linear   ROD 27-APR-1993
DEFINITION  Chinese hamster p-glycoprotein mRNA (clone ADX185), complete cds.
ACCESSION   M59254
VERSION     M59254.1  GI:191156
KEYWORDS    multidrug resistance glycoprotein; p-glycoprotein.
SOURCE      Chinese hamster, cDNA to mRNA, clone ADX185.
  ORGANISM  Cricetulus sp.
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
            Mammalia; Eutheria; Rodentia; Sciurognathi; Muridae; Cricetinae;
            Cricetulus.

RESULT 9
CRUPGP1165
LOCUS       CRUPGP1165            4304 bp    mRNA    linear   ROD 27-APR-1993
DEFINITION  Chinese hamster p-glycoprotein mRNA (clone ADX165), complete cds.
ACCESSION   M59253
VERSION     M59253.1  GI:191154
KEYWORDS    multidrug resistance glycoprotein; p-glycoprotein.
SOURCE      Chinese hamster, cDNA to mRNA, clone ADX165.
  ORGANISM  Cricetulus sp.
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
            Mammalia; Eutheria; Rodentia; Sciurognathi; Muridae; Cricetinae;
            Cricetulus.

RESULT 10
GGA9799
LOCUS       GGA9799                4018 bp    mRNA    linear   VRT 03-MAR-1999
DEFINITION  Gallus gallus mRNA for ABC transporter protein.
ACCESSION   AJ009799
VERSION     AJ009799.1  GI:3355756
KEYWORDS    ABC transporter protein; cmdr1 gene; P-glycoprotein.
SOURCE      Gallus gallus.
  ORGANISM  Gallus gallus
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
            Archosauria; Aves; Neognathae; Galliformes; Phasianidae;
            Phasianinae; Gallus.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT   New transporters and ion channels (TRICH) polypeptides, useful for
PT   diagnosing, preventing, and treating disorders associated with an
PT   abnormal expression or activity of TRICH, e.g. immunological, muscular
PT   or renal disorders  -
XX
PS   Claim 5; Page 172; 178pp; English.
XX
CC   The invention relates to human transporters and ion channels (TRICH)
CC   polypeptides, a naturally occurring amino acid sequence 90 % identical to
CC   TRICH, a biologically active fragment of TRICH or an immunogenic fragment
CC   of TRICH. Also included are an isolated polynucleotide encoding TRICH,
CC   a recombinant polynucleotide comprising a promoter sequence operably
CC   linked to the TRICH polynucleotide, a cell transformed with the
CC   recombinant polynucleotide, a transgenic organism comprising the
CC   recombinant polynucleotide, an isolated antibody that binds specifically
CC   to TRICH, and screening for compounds which bind to TRICH, modulate
CC   TRICH, modulate TRICH expression or are ant/agonists of TRICH.
CC   The polypeptides are useful for diagnosing, treating, and
CC   preventing transport, neurological, muscle, immunological disorders
CC   (e.g. scleroderma, systemic lupus erythematosus, allergies), cell
CC   proliferative disorders such as cancers (e.g. leukaemia, cervical or
CC   breast cancers), neurodegenerative disorders (e.g. Parkinson's disease,
CC   Alzheimer's disease), muscular disorders (e.g. myotonic dystrophy,
CC   catatonia), endocrine disorders (e.g. diabetes, Grave's disease),
CC   gastrointestinal disorders (e.g. Crohn's disease), renal disorders
CC   (e.g. Good pasture's syndrome), viral, bacterial, fungal, parasitic,
CC   protozoal and helminthic infections, cardiovascular disorders (e.g.
CC   atherosclerosis), or hepatic diseases (e.g. cirrhosis) and many
CC   other diseases and disorders detailed in the specification. They can also
CC   be used in assessing the effects of exogenous compounds on the
CC   expression of nucleic acid and amino acid sequences of transporters and
CC   ion channels. TRICH or its fragments may also be used in screening for
CC   compounds that specifically bind to and modulate the activity of TRICH.
CC   The polynucleotides can be used to create knock-in humanised animals or
CC   transgenic animals to model human disease. The present sequence
CC   encodes a TRICH protein.

PT   New dog P-glycoproteins (PGP) and their encoding nucleic acids, useful
PT   for determining the bioavailability of drugs and for screening for dog
PT   PGP inhibitors -
XX
PS   Claim 9; Page 102-107; 111pp; English.
XX
CC   The invention relates to dog P-glycoprotein (PGP) also referred
CC   as multidrug transporter (MDR1) and nucleic acids encoding them.
CC   The invention also includes fragments and biologically functional
CC   variants of dog P-glycoprotein. PGP and their nucleic acids are
CC   useful for determining the bioavailability of drugs and for
CC   screening PGP inhibitors. They are useful for the diagnosis and
CC   treatment of conditions characterised by PGP activity, by
CC   reducing or increasing PGP activity in a cell. PGP nucleic acids
CC   are used as oligonucleotide probes. Complements of PGP nucleic
CC   acids are useful as antisense oligonucleotides, to induce a PGP
CC   'knockout' phenotype. They are used to prepare a non-human
CC   transgenic animal, which are valuable as genetic models for
CC   human diseases.
CC   The present sequence is dog P-glycoprotein (PGP) allelic variant
CC   (Genotype D) cDNA. The PGP enzyme functions as an efflux pump
CC   exporting small molecules across the cell membrane. This enzyme
CC   is a member of the ABC transporter family.

PT   New dog P-glycoproteins (PGP) and their encoding nucleic acids, useful
PT   for determining the bioavailability of drugs and for screening for dog
PT   PGP inhibitors -
XX
PS   Claim 3; Page 58-63; 111pp; English.
XX
CC   The invention relates to dog P-glycoprotein (PGP) also referred
CC   as multidrug transporter (MDR1) and nucleic acids encoding them.
CC   The invention also includes fragments and biologically functional
CC   variants of dog P-glycoprotein. PGP and their nucleic acids are
CC   useful for determining the bioavailability of drugs and for
CC   screening PGP inhibitors. They are useful for the diagnosis and
CC   treatment of conditions characterised by PGP activity, by
CC   reducing or increasing PGP activity in a cell. PGP nucleic acids
CC   are used as oligonucleotide probes. Complements of PGP nucleic
CC   acids are useful as antisense oligonucleotides, to induce a PGP
CC   'knockout' phenotype. They are used to prepare a non-human
CC   transgenic animal, which are valuable as genetic models for
CC   human diseases.
CC   The present sequence is dog P-glycoprotein (PGP) cDNA. This
CC   sequence is also referred as Genotype C cDNA. The
CC   PGP enzyme functions as an efflux pump exporting small molecules
CC   across the cell membrane. This enzyme is a member of the ABC
CC   transporter family.

PT   New dog P-glycoproteins (PGP) and their encoding nucleic acids, useful
PT   for determining the bioavailability of drugs and for screening for dog
PT   PGP inhibitors -
XX
PS   Claim 9; Page 85-90; 111pp; English.
XX
CC   The invention relates to dog P-glycoprotein (PGP) also referred
CC   as multidrug transporter (MDR1) and nucleic acids encoding them.
CC   The invention also includes fragments and biologically functional
CC   variants of dog P-glycoprotein. PGP and their nucleic acids are
CC   useful for determining the bioavailability of drugs and for
CC   screening PGP inhibitors. They are useful for the diagnosis and
CC   treatment of conditions characterised by PGP activity, by
CC   reducing or increasing PGP activity in a cell. PGP nucleic acids
CC   are used as oligonucleotide probes. Complements of PGP nucleic
CC   acids are useful as antisense oligonucleotides, to induce a PGP
CC   'knockout' phenotype. They are used to prepare a non-human
CC   transgenic animal, which are valuable as genetic models for
CC   human diseases.
CC   The present sequence is dog P-glycoprotein (PGP) allelic variant
CC   (Genotype A) cDNA. The PGP enzyme functions as an efflux pump
CC   exporting small molecules across the cell membrane. This enzyme
CC   is a member of the ABC transporter family.
